River City OMS Dental Implant Warranty

1. River City OMS will warranty dental implants we place in **Normal Risk Patients** for 5 years so long as: 1) the patient is compliant with regular maintenance, 2) the tooth/teeth for the implant(s) was made by an experienced Texas licensed restorative dentist River City OMS agreed to work with, and 3) River City OMS is still in business. If you experience a biologic or mechanical failure leading to the complete loss of the implant within 5 years of placing the implant and meet the 3 requirements above we will replace the implant one time at no charge using the same type of anesthesia used to originally place the implant.
2. If an implant is placed under warranty, there will be a charge for necessary additional parts and pieces such as cover screws or abutments. There will be a charge for necessary bone or gum grafts.
3. If a replacement implant fails there will be a charge to replace the replacement implant. There is no warranty on the replacement implant.
4. This warranty does not apply to the prosthetic tooth or teeth on the implant. The restorative doctor who made the tooth/teeth may or may not warranty the teeth.
5. A **Normal Risk Patient** is a patient who does NOT have or participate in one or more of the following:
 - A. Previous biologic failure of any implant in the body, including dental implants
 - B. Smoking – you must stop smoking 3 months before implant surgery and continue to not smoke in order to be considered a Normal Risk Patient
 - C. Diabetes – diabetic patients must show an average hemoglobin A1c of 8.0 or less from the time of implant placement in order to be considered a Normal Risk Patient.
 - D. Vascular disease – patients with blockages in the arteries are more likely to have healing problems.
 - E. Immunosuppression – immunosuppressed patients include but are not limited to: transplant patients, patients with autoimmune conditions, liver or kidney failure patients, cancer patients, or HIV/AIDS patients.
 - F. Chronic steroid use
 - G. **Penicillin/amoxicillin allergy** – there are articles in the scientific literature that have studied thousands of implants and found a three times higher implant failure rate in penicillin allergic patients. No one understands why this happens but it is a known and developing concern.
 - H. Radiation therapy to the head, neck, or face no matter how long ago.
 - I. Use of bisphosphonate drugs and other drugs that affect bone metabolism such as:
 - Boniva
 - Fosamax
 - Actonel
 - Aredia
 - Zometa
 - Reclast
 - Alendronate
 - Denosumab
 - Prolia
 - Xgeva
 - Bevacizumab
 - Avastin
